Concorde Pocket Manual Oct 03 2022 First flown in 1969, Concorde was the first supersonic aircraft to go into commercial service in 1976 and made her final flight in 2003. She was operated primarily by British Airways and Air

France. British Airways' Concorde made just under 50,000 flights and flew more than 2.5m passengers supersonically. A typical London to New York crossing would take a little less than three and a half hours compared to around eight hours for a 'subsonic flight'. In November 1986 a Concorde flew around the world, covering 28,238 miles in 29 hours, 59 minutes. Today, Concorde can be viewed at museums across the UK and in France, including at IWM Duxford, Brooklands and Fleet Air Arm Museum, as well as at Heathrow, Manchester and Paris-Orly airports. However, there have been recent reports suggest that a Concorde may start operating commercially again. Through a series of key documents the book tells the story of how the aircraft was designed and developed as well as ground-breaking moments in her commercial history.

Aerospatiale/BAC Concorde Nov 04 2022 Written by two of British Airways' most experienced Concorde flight crew, the Concorde Manual is the latest aircraft manual from

Haynes, following on from the acclaim received by the Spitfire Manual. Concentrating on the technical and engineering aspects of Concorde, this manual gives rare insights into owning, operating, servicing and flying the supersonic airliner. Although the British and French Concorde fleets were prematurely retired in 2003, interest in this marvel of design and technology remains undiminished and all who admire Concorde will relish the unique information provided in this innovative title. Between them the co-authors, Dave Leney (pilot) and David Macdonald (flight engineer) have more than 35 years of flying experience on Concorde. For the Haynes Concorde Manual the authors were given special access to the Concorde flight simulator at Brooklands, Surrey, and to the preserved Concorde, G-BOAF, at Filton in Bristol, to recreate and photograph aspects of Concorde engineering and flight deck operations. The pictorial coverage of flight deck procedures is particularly comprehensive,

providing an impressive level of detail hitherto unseen in print. The Anglo-French Concorde supersonic passenger transport is probably the most famous airliner in history. Its glamour was exceeded only by its speed of more than Mach 2 - twice the speed of sound. Concorde was able to cross the Atlantic from London to New York in little more than three hours, cutting the journey time of conventional subsonic airliners by more than half. In 2003, when the British and French Concorde fleets were prematurely retired from service, so ended a unique era in passenger travel and supersonic passenger aircraft design. Although the futuristic shape of Concorde no longer graces the skies, popular interest in this marvel of aeronautical design is undiminished.

Airbus A380 May 30 2022 The Airbus A380 is the world's most recognised and most talked about airliner since the Boeing 747 and

Concorde appeared in the skies in the late 1960s. Designed to challenge Boeing's monopoly in the large-aircraft market, it made its first flight in April 2005, entering commercial service two years later with Singapore Airlines. This jet has become so popular that every four minutes--24 hours a day, seven days a week--an A380 is taking off or landing somewhere in the world. There is no other development in recent aviation history to rival this remarkable aircraft.
