 Interpreting and Translation Services and the Applied Language Solutions Contract Nov 03 2022 Evidence suggests that the MoJ did not have a sufficient understanding of the complexities of court interpreting work. Significant concern was revealed that quality standards could be diminished by the imposition of a tiered system to enable a wider pool of interpreters, and by the introduction of lower levels of pay. However, the Department pushed ahead with the contract and failed to properly anticipate or address the potential for problems with Applied Language Solutions' (ALS) capacity to deliver on its promises. ALS, and more recently Capita, has been unable to recruit qualified and experienced interpreters in sufficient numbers. Professional interpreters have largely boycotted the new arrangements and Capita-ALS clearly needed significantly more resources than it had at its disposal. It also only paid lip service to the regulatory duties accepted under the Framework Agreement, yet did not have the capacity to cope with complaints or to implement basic vetting procedures. The MoJ has had to monitor Capita-ALS very closely to secure the level of improvement necessary to make the Agreement workable, and continues to do so. The existing arrangements may not be financially sustainable as Capita is propping up the continuation of the Agreement, which mean that the Department's savings, originally projected to be £15million, are effectively being secured at the company's expense. Actions taken by MoJ also had the effect of hampering the inquiry when HMCTS issued an edict to its staff instructing them not to participate in the Committee's online consultation, established to invite direct observations from frontline staff of the performance of ALS

 Translation Solutions for Many Languages Mar 15 2021 Many "translation solutions" (often called "procedures," "techniques," or "strategies") have been proposed over the past 50 years or so in French, Chinese, Russian, Ukrainian, English, Spanish, German, Japanese, Italian, Czech, and Slovak. This book analyzes, criticizes and compares them, proposing a new list of solutions that can be used in training translators to work between many languages. The book also traces out an entirely new history of contemporary translation studies, showing for example how the Russian tradition was adapted in China, how the impact of transformational linguistics was resisted, and how scholarship has developed an intercultural metalanguage over and above the concerns of specific national languages. The book reveals the intensely political nature of translation theory, even in its most apparently technical aspects. The lists were used to advance the agendas of not just linguistic nationalisms but also state regimes – this is a history in which Hitler, Stalin, and Mao all played roles, Communist propaganda and imperialist evangelism were both legitimized, Ukrainian advances in translation theory were forcefully silenced in the 1930s, the Cold War both stimulated the application of transformational grammar and blocked news of Russian translation theory, French translation theory was conscripted into the agenda of Japanese exceptionalism, and much else.
 Mobile Speech and Advanced Natural Language Solutions Oct 02 2022 "Mobile Speech and Advanced Natural Language Solutions" presents the discussion of the most recent advances in intelligent human-computer interaction, including fascinating new study findings on talk-in-interaction, which is the province of conversation analysis, a subfield in sociology/sociolinguistics, a new and emerging area in natural language understanding. Editors Amy Neustein and Judith A. Markowitz have recruited a talented group of contributors to introduce the next generation natural language technologies for practical speech processing applications that serve the consumer's need for well-functioning natural language-driven personal assistants and other mobile devices, while also addressing business' need for better functioning IVR-driven call centers that yield a more satisfying experience for the caller. This anthology is aimed at two distinct audiences: one consisting of speech engineers and system developers; the other comprised of linguists and cognitive scientists. The text builds on the experience and knowledge of each of these audiences by exposing them to the work of the other.
 Globalizing Domain-Specific Languages Nov 10 2020 The development of modern complex software-intensive systems often involves the use of multiple DSMLs that capture different system aspects. Supporting coordinated use of DSMLs leads to what we call the globalization of modeling languages, that is, the use of multiple modeling languages to support coordinated development of diverse aspects of a system. In this book, a number of articles describe the vision and the way globalized DSMLs currently assist integrated DSML support teams working on systems that span many domains and concerns to determine how their work on a particular aspect influences work on other aspects. Globalized DSMLs offer support for communicating relevant information, and for coordinating development activities and associated technologies within and across teams, in addition to providing support for imposing control over development artifacts produced by multiple teams. DSMLs can be used to support socio-technical coordination by providing the means for stakeholders to bridge the gap between how they perceive a problem and its solution, and the programming technologies used to implement a solution. They also support coordination of work across multiple teams. DSMLs developed in an independent manner to meet the specific needs of domain experts have an associated framework that regulates interactions needed to support collaboration and work coordination across different system domains. The articles in the book describe how multiple heterogeneous modeling languages (or DSMLs) can be related to determine how different aspects of a system influence each other. The book includes a research roadmap that broadens the current DSML research focus beyond the development of independent DSMLs to one that provides support for globalized DSMLs.

Translating in Linguistically Diverse Societies Jun 05 2020 This work is the first book-length treatment on translation policy. Nearly everywhere in the world, populations are multilingual and mobile; consequently, language policies developed by the authorities must include choices about the use or non-use of translation. This book recognizes that these choices (or the absence thereof) become policies of their own in terms of translation. It builds upon the work of scholars in the fields of translation studies and language planning and policy in order to develop a new theoretical perspective on translation policy. In essence, the book proposes that translation policy can be understood as the management, practice, and beliefs surrounding the use of translation. The book deals with these issues under European and international law and then explores such management, practice, and beliefs in the UK, as a case study. Ultimately, the reader can find a fuller appreciation of both the importance and complexity of translation policy.

Research Anthology on Applied Linguistics and Language Practices Mar 27 2022 Whether through speech, writing, or other methods, language and communication has been an essential tool for human cooperation and development. Across the world, language varies drastically based on culture and disposition. Even in areas in which the language is standardized, it is common to have many varieties of dialects. It is essential to understand applied linguistics and language practices to create equitable spaces for all dialects and languages. The Research Anthology on Applied Linguistics and Language Practices discusses in-depth the current global research on linguistics from the development of language to the practices in language acquisition. It further discusses the social factors behind language and dialect as well as cultural identity found behind unique traits in language and dialect. Covering topics such as linguistic equity, phonology, and sociolinguistics, this major reference work is an indispensable resource for linguists, pre-service teachers, libraries, students and educators of higher education, educational administration, ESL organizations, government officials, researchers, and academicians.

Translation and Medicine Aug 27 2019 The contributors to "Translation and Medicine" address several broad aspects of medical translation, from the cultural/historic framework of the language of medicine to pragmatic considerations of register and terminology. Their articles highlight some of the contributions translation has made to medical science and addresses some of the questions raised by those who escort the advances of medicine across language and cultural barriers and those who train the next generation of medical translators.Section 1 covers some Historical and Cultural Aspects that have characterized the language of medicine in Japan and Western Europe, with special emphasis on French and Spanish; Section 2 opens some vistas on The Medical Translator in Training with two specific university-level programs in Switzerland and in Spain, as well as an in-depth analysis of who makes the better medical translator: the medically knowledgeable linguist or the linguistically knowledgeable medical professional; and Section 3 looks at several facets of The Translator at Work, with discussions of the translator-client relationship and the art of audience-specific translating, an insider s view of the Translation Unit of the National Institutes of Health, and a detailed study of online medical terminology resources.

Students' Guide to Programming Languages Jan 13 2021 Students' Guide to Programming Languages introduces programming languages, emphasizing why they are needed, how they are defined and constructed, and where and how they are used. With greater access to computers at work, at school, and in the home, more and more people are now able to write programs. Only a small number of these people recognize the underlying features of the programming languages they are using, and even fewer people appreciate the features that are common to most programming languages. This book demonstrates how most programming languages are based upon the same concepts and how knowledge of these concepts can benefit the analyst and the programmer. When specifying computer solutions to real problems, the systems analyst and the programmer must be able to stand back from the particular problem in hand and visualize a solution that is independent of the constraints and limitations imposed by the programming language itself. The text helps in achieving these goals. The book as well is suitable for college students following BTEC and City and Guilds courses in computer studies and IT topics, including professional commercial and end-users.

The Ministry of Justice's Language Service Contract Jul 19 2021 Before January 2012, the Ministry generally booked interpretation services directly with individual interpreters, many of whom were listed on the National Register of Public Service Interpreters (NRPSI). This approach was administratively inefficient and the Ministry decided to set up a new centralised procurement system. The Ministry awarded the contract to a company, ALS, that was clearly incapable of delivering. Despite having been warned that ALS was too small to shoulder a contract worth more than £1 million, it went ahead and handed them an annual £42 million national contract. The Ministry did not understand its own basic requirements and ignored the views of interpreters, who had serious concerns about the contract. Capita took over ALS in late 2011. The Ministry needed access to 1,200 interpreters when the contract went live but the company had only 280 properly assessed interpreters willing to work for it. The Ministry, though, still decided to go live nationally in one go. Many of the 'interpreters' it thought were available had simply registered an interest on the company's website and had been subject to no official checks. As a result, the company was able to meet only 58% of bookings causing a sharp rise in delayed, postponed and abandoned trials; individuals being kept on remand solely because no interpreter was available; and the quality of interpreters has at times been appalling. However Capita has only been fined £2,200 to date for failing to meet the terms of the contract. Capita-ALS is now fulfilling more bookings, but it is still struggling

Paradigm Shift in Language Planning and Policy Apr 27 2022 The book proposes a paradigm shift in language planning and language policy in Africa. For the past fifty years, the dominant model has been the hegemonic model whereby a language of wider communication (LWC) is imposed on minority languages. It is now time for a paradigm shift in favor of a more egalitarian model in which all the languages spoken in the same country, irrespective of their size, are planned. The paradigm shift concerns four critical areas: status planning, cost-benefit planning, acquisition planning, and corpus planning. Such a shift is justified for the following reasons: First, the hegemonic model has a dismal track record of success in Africa and elsewhere. Second, the hegemonic model exacerbates linguistic conflicts in many countries. Consequently, policy makers shun it for fear of jeopardizing the fragile social fabric in their respective countries. Last, a shift away from the hegemonic model is recommended because it is too costly to implement. The "democratic model" is undergirded by the Strategic Game Theory proposed by David Laitin. It forecasts a 3±1 language outcome for most African countries. This outcome supports the "three language formula" now called for by the United Nations Development Program (UNDP).

The Irish Language in the Digital Age Nov 30 2019 This white paper is part of a series that promotes knowledge about language technology and its potential. It addresses educators, journalists, politicians, language communities and others. The availability and use of language technology in Europe varies between languages. Consequently, the actions that are required to further support research and development of language technologies also differ for each language. The required actions depend on many factors, such as the complexity of a given language and the size of its community. META-NET, a Network of Excellence funded by the European Commission, has conducted an analysis of current language resources and technologies. This analysis focused on the 23 official European languages as well as other important national and regional languages in Europe. The results of this analysis suggest that there are many significant research gaps for each language. A more detailed expert analysis and assessment of the current situation will help maximise the impact of additional research and minimize any risks. META-NET consists of 54 research centres from 33 countries that are working with stakeholders from commercial businesses, government agencies, industry, research organisations, software companies, technology providers and European universities. Together, they are creating a common technology vision while developing a strategic research agenda that shows how language technology applications can address any research gaps by 2020.

Translation as Social Justice Apr 03 2020 This book analyzes the translation policies and practices of international non-governmental organizations (INGOs), engaging in critical questions around the ways in which translation can redress power dynamics between INGOs and their beneficiaries and the role of activist researchers in contributing to these debates. The volume examines the duality of translation and interpreting in INGOs, traditionally undervalued and under-resourced while simultaneously acknowledged as a powerful tool in ensuring these organizations work according to their own values of equal access to information, dialogue, and political representation. Drawing on over ten years of ethnographic fieldwork and interview data at a wide variety of INGOs, Tesseur offers unique insights into if and how INGOs plan for translation and interpreting needs while also critically reflecting on her own experience and the ways in which activist researchers like her can ensure social justice efforts are fully reflected in their own working practices. Encouraging a new interdisciplinary research agenda, the volume seeks to raise the profile of language and translation in humanitarian and development contexts and cross-disciplinary dialogue in scholarship on these issues. The book will be of interest to scholars in translation and interpreting studies, sociolinguistics, development studies, and international relations.

Correct English in 24 Hours Oct 22 2021 The Exercises in this booklet deal with common errors which are committed by students of English Language. The solutions to the exercises should be used by the students to verify the correctness of their own answers. All phrases are compiled and gathered from speakers who acquired English as a second or third language. This publication as a whole

is specially compiled to help speakers of other languages improve their English studies. Although it is especially useful for adult learners, ESOL (English for Speakers of Other Languages), EFL (English as a Foreign Language), EAL (English as an Additional Language) students; junior, senior, middle school children who are learning English will benefit from its usage. Students who are studying other courses such as Business English and Postrgaduate Management will also benefit from Correct English in 24 Hours in order to improve their English Language skills. This publication is also a useful resource for teachers of English Language. Even in countries where English is the first language, native speakers, especially primary and secondary school children still need help with grammar and literacy. Although grammar schools are not common today, English language (rather than merely literature) needs an equal if not more focus, especially in the school curriculum; a publication like this will assist those endeavours.

Exploring Computer Science with Scheme Jul 27 2019 A presentation of the central and basic concepts, techniques, and tools of computer science, with the emphasis on presenting a problem-solving approach and on providing a survey of all of the most important topics covered in degree programmes. Scheme is used throughout as the programming language and the author stresses a functional programming approach to create simple functions so as to obtain the desired programming goal. Such simple functions are easily tested individually, which greatly helps in producing programs that work correctly first time. Throughout, the author aids to writing programs, and makes liberal use of boxes with "Mistakes to Avoid." Programming examples include: * abstracting a problem; * creating pseudo code as an intermediate solution; * top-down and bottom-up design; * building procedural and data abstractions; * writing progams in modules which are easily testable. Numerous exercises help readers test their understanding of the material and develop ideas in greater depth, making this an ideal first course for all students coming to computer science for the first time.

Human-Computer Interaction - INTERACT 2009 Jun 25 2019 INTERACT 2009 was the 12th of a series of INTERACT international c- ferences supported by the IFIP Technical Committee 13 on Human–Computer Interaction. This year,INTERACT washeld in Uppsala (Sweden), organizedby the Swedish Interdisciplinary Interest Group for Human–Computer Interaction (STIMDI) in cooperation with the Department of Information Technology at Uppsala University. Like its predecessors, INTERACT 2009 highlighted, both to the academic and to the industrial world, the importance of the human–computer interaction (HCI) area and its most recent breakthroughs on current applications. Both - perienced HCI researchers and professionals, as well as newcomers to the HCI ?eld, interested in designing or evaluating interactive software, developing new interaction technologies, or investigating overarching theories of HCI, found in INTERACT 2009 a great forum for communication with people of similar int- ests, to encourage collaboration and to learn. INTERACT 2009 had Research and Practice as its special theme. The r- son we selected this theme is that the research within the ?eld has drifted away from the practicalapplicability of its results and that the HCI practice has come to disregard the knowledge and development within the academic community.
