Understanding Physics for JEE Main and Advanced Electricity and Magnetism 2020 Jul 27 2019 IIT JEE Main and Advanced test the conceptual knowledge of aspirants by asking real-life application based problems on Physics, Chemistry, and Mathematics. Keeping this in mind, we have been publishing our best-selling series of books exclusively on different topics of all three subjects to enable aspirants for advanced ability to tackle any type of questions asked from them. "Understanding Physics" is one of those best-selling series written by renowned author, D.C. Pandey which carries five fully comprehensive textbooks presenting 36 essential chapters of Physics. The fourth book on Electricity and Magnetism has been revised thoroughly to reinforce the foundation of Electricity and Magnetism simply and coherently with 6 scoring chapters promoting in-depth discussions on each theory. The focused study material for concept building along with applications for solidifying the problem-solving skills given in this book are highly advantageous. It also provides the last 6 years' questions of JEE Main and Advanced to know the trend and patterns of questions. Enclosed with well-organized and premier set of study material to develop the substantial knowledge of Physics required for acing IIT JEE Main and Advanced, this book is the absolute best in terms of both quality and quantity.

Engineering Tasks for the New Century Aug 08 2020 The U.S.-Japan bilateral task force was tasked with addressing the following questions: (1) How do Japan and the United States educate and train engineers, and what are the major similarities, differences, and trends? (2)

What are the superior practices that have been developed by each country, especially approaches that could be adopted by the other country?

(3) Are there areas in which expanded U.S.-Japan cooperation could help to improve engineering education in the two countries and around the world? The joint task force was organized by the Committee on Advanced Technology and the International Environment (Committee 149) of the Japan Society for the Promotion of Science (JSPS), and the Committee on Japan (COJ) of the National Research Council (NRC). Committee 149's work was supported by member dues, and the COJ's work was supported by the United States-Japan Foundation and the National Academy of Engineering. The joint task force was chaired by Mildred Dresselhaus of the Massachusetts Institute of Technology, and Sogo Okamura of Tokyo Denki University. Japan and the United States are two of the leading nations in the world in engineering education and practice. Their systems for training and educating engineers display marked contrasts, resulting from the very different economic and cultural environments in which they have developed. The joint task force used a "lifelong learning" approach in examining the two countries' systems, exploring differences and similarities in K-12 education of future engineers, undergraduate and graduate education, as well as continuing education of working professionals. The panel also explored two important issues that will affect engineering education in both countries in the future: the need to educate and train "global engineers" who can work effectively in international contexts, and the potential for information technology to transform engineering education in the future.
