Locating Law, 3rd Edition Nov 10 2020 Praise for the second edition: "This book is the best available for teaching the role of law in society and making sense of how it operates within the (inter)connections of race, class and gender dynamics often perpetuating oppression. ... Locating Law is essential for undergraduate students in justice, sociology and criminology." - Margot Hurlbert, University of Regina "Students regularly tell me that Locating Law is their favourite book out of the selections for the Law and Society course. The case studies are sufficiently different from one another that the students deepen their general knowledge, and they appreciate the fact that the chapters are written in a style they can understand." - Jennifer Jarman, Lakehead University A primary concern within the study of law has been to understand the "law-society" relation. Underlying this concern is the belief that law has a distinctly social basis; it both shapes - and is shaped by - the society in which it operates. This book explores the law-society relation by locating law within the nexus of race/class/gender/sexuality relations in society. In addition to updating the material in the theoretical and substantive chapters, this third edition of Locating Law includes three new contributions: sentencing law and Aboriginal peoples; corporations and the law; and obscenity and indecency legislation. The analyses offered in the book are sure to generate discussion and debate and, in the process, enhance our understanding of law's location.

Drawdown Jan 31 2020 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, Vox "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
