Calculus May 05 2020 this book has especially been designed to cater to the needs of the students who study 'Calculus' in the first semester of B.Sc.(Hons), Mathematics in the University of Delhi and other Central Universities where the CBCS curriculum is being offered. The text introduces the fundamentals of Calculus to the readers in the easiest form and is supplemented with solved examples. The Content of the book is divided into Eleven Chapters. The first chapter introduces the students to the hyperbolic trigonometric functions. Becoming familiar with the circular trigonometric functions, a student will thus connect with the book through this chapter very easily. The second chapter is an introduction to higher-order derivatives followed by a chapter on applications of the derivative. The second and third chapters later connect with chapter seven on Reduction formulae, while the fourth chapter on L'Hopital rule, fifth on Parametric curves and the sixth one on Polar Coordinates may be studied independently. Chapters five and six together offer a good introduction to the methods of Tracing of curves and are further applied to the study of Conic sections in chapter nine. Chapters eight and eleven are applications of the derivative and integrals in computing Area and Volume and Modeling ballistic and Planetary motions respectively. These modeling methods would utilize almost everything the reader has studied from chapters one to nine, and hence offering a (viii) panoramic view of the concepts of calculus. The tenth chapter provides a quick introduction to the methods of calculus for Vector-Valued functions and gives a foundation for the study of multivariate calculus which they will study in the next semester.
