the interface between the natural and social sciences. It brings together research on the region's environmental resource use and shared ecological challenges in the context of present day globalization to offer insights for possible future directions. The book introduces unique approaches to the study of Southeast Asia's environmental changes and resource management under the influence of intensifying economic change in the region. It also examines the slow erosion of Southeast Asia's rich environment and addresses serious issues such as the decrease in biodiversity and tropical forests, and the degradation of peat lands. At the same time, it discusses the social issues that are tied to energy-dependent growth and have intensified over the last two decades. It also analyzes the new roadmaps being created to protect, conserve, and manage the environment. By investigating the many ecological issues surrounding us, the volume brings to light the constant struggles we face while trying to develop a more inclusive and equitable approach to natural resources governance. This volume is relevant for students, academics and researchers who have an interest in the Southeast Asian environment and the way in which we use and interact with it.

Land Use Change and Sustainability Sep 19 2021 This book discusses aspects of land use change and sustainability in ways that may generate further research ideas. It brings together discussions from leading researchers and scholars in the field of land use change and sustainability from five different countries including the USA, Ethiopia, Guyana, Taiwan, and Indonesia. Based on empirical research and case studies, the book is divided into two sections. The first section is subdivided into four chapters and discusses land use sustainability in the Northern Great Plains of the USA; effects of rural land use and tenure on sustainable management of mangroves in Corentyne, Guyana; the property formation process in peri-urban areas of Ethiopia; and the effects of green energy production on farmlands in the Yulin County of Taiwan. The second section of the book is subdivided from

into two chapters and discusses cases pertaining to land use mapping and sustainability including land cover/land use mapping using soft computing techniques with optimized features; and applying systems analysis to evaluate Jelutung as option for sustainable use of peat lands in Central Kalimantan, Indonesia. The book is insightful, thought provoking, concise, and easy to understand. It could serve as an important reference material on land use change and sustainability.

inefficiency of time and resource, literally, no place to hide. Project examples will help teams implement the principles that shorten cycle times, eliminate error, improve quality and reduce costs to succeed in meeting project commitments. Emerging Lean enterprise relationships between clients, EPC contractors and their entire supply chain will advance what constitutes the new, market-differentiating performance of individuals, project teams and companies - justifying high levels of trust and inter-organizational efforts to improve. Client executives will learn to recognize root causes of risk and sources of excellence to mitigate them. Well-developed strategic improvement is often constrained because the traditional way - current means and methods - fit squarely in everyone's comfort zone. By learning to ask the right questions, top-client leadership will soon render overruns from the best traditional systems as "not-good enough" and strive for a new level of excellence. EPC executives will better engage creative voices from their best resources and stakeholders to resolve all concerns and define a unified vision for how to deliver on clients' expectations without overruns during capital project delivery. Lean methods will effectively assure that vision, principles and best expectations are understood and implemented at the workface. Department, discipline and stakeholder leaders will align and no longer frustrate each other and their clients. They will plan and execute with increased efficiency and effectiveness. Cost reduction will accelerate, retaining only client-valued quality - enabling a nimble response to market opportunities and threats. Project and program managers will confidently accept intense, market-induced cost and schedule-reduction efforts. They will apply new metrics, measure potential and extract, align and pilot improvements. They will make workface progress transparent to simplify resource balancing, full utilization and workface flow during all project phases. The results will differentiate team members and their project's performance on the world stage.

professionals and the skilled labor force will gain confidence to make and keep increasingly difficult commitments and experience thereby increasing opportunity in an organization known for excellence. They will fully engage heart and mind for leaders who expect excellence and they trust to enable and reward best practice performance while they jointly eliminate root causes of problems before they happen. This book guides readers through each essential role for the transformation to Lean...not just at the lowest levels but of the entire business model and all the supporting processes. Resulting market recognition of sustained excellence of people, their systems and they way they work together will create a market-leading force.

Manpower Policies for the Use of Science and Technology in Development May 04 2020 Manpower Policies for the Use of Science and Technology in Development discusses several factors to consider when making human-resource-related policies in the science and technology industries. The book is comprised of eight chapters; each chapter tackles a specific area of concern regarding manpower policies. Chapter 1 covers the frameworks and definitions and discusses topics such as the significance of manpower for development. Chapter 2 deals with demand

supply, and forecasting, and Chapter 3 reviews the national structures for science and technology. The fourth chapter covers domestic training institution, including the roles and effectiveness, while the fifth chapter talks about the creation and evolution of domestic institutions. Chapter 6 then discusses the multinational agencies and transnational firms. Chapter 7 tackles the concept of brain drain, and Chapter 8 discusses the conclusion and provides recommendations. The book will be of great interest to professionals in the science and technology industries, especially those who hold management positions.

Land Cover and Land Use Change on Islands Dec 11 2020

Globalization is not a new phenomenon, but it is posing new challenges to humans and natural ecosystems in the 21st century. From climate change to increasingly mobile human populations to the global economy, the relationship between humans and their environment is being modified in ways that will have long-term impacts on ecological health, biodiversity, ecosystem goods and services, population vulnerability, and sustainability. These changes and challenges are perhaps nowhere more evident than in island ecosystems. Buffeted by rising ocean temperatures, extreme weather events, sea-level rise, climate change, tourism, population migration, invasive species, and resource limitations, islands represent both the greatest vulnerability to globalization and also the greatest scientific opportunity to study the significance of global changes on ecosystem processes, human-environment interactions, conservation, environmental policy, and island sustainability. In this book, we study islands through the lens of Land Cover/Land Use Change (LCLUC) and the multi-scale and multi-thematic drivers of change. In addition to assessing the key processes that shape and re-shape island ecosystems and their land cover/land use changes, the book highlights measurement and assessment methods to characterize patterns and trajectories of change and models to examine the

social-ecological drivers of change on islands. For instance, chapters report on the results of a meta-analysis to examine trends in published literature on islands, a satellite image time-series to track changes in urbanization, social surveys to support household analyses, field sampling to represent the state of resources and their limitations on islands, and dynamic systems models to link socio-economic data to LCLUC patterns. The authors report on a diversity of islands, conditions, and circumstances that affect LCLUC patterns and processes, often informed through perspectives rooted, for instance, in conservation, demography, ecology, economics, geography, policy, and sociology.

The Inventory Toolkit Nov 29 2019 Looking beyond the complexity and theory of inventory management, authors Geoff Relph and Catherine Milner examine managing inventory and achieving targets. Whilst the first edition mainly focused on planning, this new edition of *The Inventory Toolkit* includes three new chapters that go beyond planning to implementation. Amongst other topics, the new chapters cover holding and moving inventory, working with suppliers and using stock and flow to identify pinch points and facilitate lean and agile operations. This comprehensive second edition of *The Inventory Toolkit* includes case studies from diverse industries such as retail and aerospace, and worked examples and regular exercises which illustrate how the inventory tools can be used in an operational setting. It is an invaluable reference guide for students and practitioners focusing on inventory management and operations management in manufacturing and retail, as well as operational staff involved in the implementation of the MRP and inventory management modules of ERP systems.

Advances In Manufacturing Technology VIII Jun 16 2021 This volume comprises the Proceedings of the Tenth National Conference on Manufacturing Research held at the University of Technology, Loughborough, UK, in September 1994, the latest in a series of meetings first convened in 1985, and the first to be published by Taylor & Francis Ltd.; Keith Case and Steven Newman, the Conference Chairs, the book contains R. H. Weston's keynote address, "Requirements and Trends in Manufacturing Systems", and over 140 contributions, which together represent the leading edge, state-of-the-art knowledge in the area of manufacturing and production engineering and management. The contributions are organized by theme: process planning; systems integration and modelling; simulation and scheduling; concurrent engineering and design; process control; and inspection; and thus demonstrate the enormous range of topics that manufacturing research embraces and their relevance to improving current industrial practice.

contemporary view of the processes, learn about new technology for implementing solutions, and are presented with change methods that address the people and behaviors vital to supply chain operations. Topics include demand planning, Integrated Business Planning (Advanced S&OP), master scheduling, material requirements planning, capacity planning, data accuracy, factory scheduling supplier planning, implementation, business improvement, new technologies and more. Outlining the practices that have boosted the health of supply chains for more than 25 years, this invaluable book: Describes how the Business Excellence Practices resolve the common problems encountered in operating a supply chain Provides strategies and methods to significantly improve customer service, financials and grow the business Identifies when and how Unparalleled Planning and Execution Practices should be applied Guarantees success if the recommendations are followed Supercharged Supply Chains: Discover Unparalleled Business Planning and Execution Practices is essential reading for all executives and anyone involved in forecasting, planning, scheduling, inventory control, finance, production, purchasing and management of supply chains. It provides a great overview of the entire supply chain and goes into great detail regarding each element that makes up the supply chain. It also explains in depth how all functions of a company play an important role.

Environmental Hydrology and Hydraulics Oct 21 2021 Water is a precious natural resource, which is crucial to our survival. It needs to be used judiciously in the context of an increasing population not only to sustain essential requirements such as those for drinking and domestic usage, but also for increased food production, industrial usage, power generation, navigational requirements, pisciculture, recreation, landscaping etc. There are many books dealing with hydrology, hydraulics and hydraulic structures, which generally deal with larger problems of development, analysis, design and implementation of water

Tropical Peatland Eco-management Jan 30 2020 In this "Tropical Peatland Eco-management" book, eco-management is new terminology as an abbreviation of "ecology-based management for natural capital enhancement". Key concept on this eco-management is derived from previous book: "Tropical Peatland Ecosystem"(Springer, 2015, eds. by M. Osaki and N. Tsuji). Based on this new concept, this book thoroughly examines tropical peatland eco-management for scientists, political decision makers, governmental officials, land managers, students, and NGO/NPOs who are interested in 1) what the impact of peatland on climate change and ecosystem function, 2) how the management of disturbed peatland, and 3) drawing global scale restoration mechanisms of peatland and wetland. In tropical peatland, a large amount of GHGs (carbon dioxide, methane, and nitrous oxide) is emitted due to the unappropriate development and inadequate management of peatland. The peatland ecosystems consist of the carbon-water complex, which is affected easily by the impact of human and climate change. Throughout much research of tropical peatland, the problems that result from development of tropical peatland are found to stem mainly from a lack of understanding of the complexities of

In past, almost all peatland development and management system have been generally designed on water drainage system. On the contrast of old system, an innovated eco- management is, here, proposed as water irrigation system including water cycling and natural capital enhancement. Through this book readers will learn the advanced peatland eco-management, with more practical methods and procedure based on ecosystem knowledge. .

Collaboration and Integration in Construction, Engineering, Management and Technology Apr 14 2021 This book gathers papers presented at the 11th International Conference on Construction in the 21st Century, held in London in 2019. Bringing together a diverse group of government agencies, academics, professionals, and students, the book addresses issues related to construction safety, innovative technologies, lean and sustainable construction, international construction, improving quality and productivity, and innovative materials in the construction industry. In addition, it highlights international collaborations between various disciplines in the areas of construction, engineering, management, and technology. The book demonstrates that, as the industry moves forward in an ever-complex global economy, multi-national collaboration is crucial, and its future growth will undoubtedly depend on international teamwork and alliances.
