*The Economics of Social Determinants of Health and Health Inequalities* Nov 22 2021 "This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health

inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of

investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

All students can relate to businesses they encounter in their everyday lives. Whether they open an art studio, do social work, trade on Wall Street, work for the government, or bartend at the local pub, students will benefit from understanding the economic forces behind their work.

**Hall of Mirrors** Aug 08 2020 The two great financial crises of the past century are the Great Depression of the 1930s and the Great

Recession, which began in 2008. Both occurred against the backdrop of sharp credit booms, dubious banking practices, and a fragile and unstable global financial system. When markets went into cardiac arrest in 2008, policymakers invoked the lessons of the Great Depression in attempting to avert the worst. While their response prevented a financial collapse and catastrophic depression like that of the 1930s, unemployment in the U.S. and Europe still rose to excruciating high levels. Pain and suffering were widespread. The question, given this, is why didn't policymakers do better? Hall of Mirrors, Barry Eichengreen's monumental twinned history of the two crises, provides the farthest-reaching answer to this question to date. Alternating back and forth between the two crises and between North America and Europe, Eichengreen shows how fear of another Depression following the collapse of Lehman Brothers shaped policy responses on both continents, with both positive and negative

results. Since bank failures were a prominent feature of the Great Depression, policymakers moved quickly to strengthen troubled banks. But because derivatives markets were not important in the 1930s, they missed problems in the so-called shadow banking system. Having done too little to support spending in the 1930s, governments also ramped up public spending this time around. But the response was indiscriminate and quickly came back to haunt overly indebted governments, particularly in Southern Europe. Moreover, because politicians overpromised, and because their measures failed to stave off a major recession, a backlash quickly developed against activist governments and central banks. Policymakers then prematurely succumbed to the temptation to return to normal policies before normal conditions had returned. The result has been a grindingly slow recovery in the United States and endless recession in Europe. *Hall of Mirrors* is both a major work of economic history and an essential exploration of

how we avoided making only some of the same mistakes twice. It shows not just how the "lessons" of Great Depression history continue to shape society's response to contemporary economic problems, but also how the experience of the Great Recession will permanently change how we think about the Great Depression.

**Imagining Economics Otherwise** Jan 01 2020

It is possible to be 'irrational' without being 'uneconomic'? What is the link between 'Value' and 'values'? What do economists do when they 'explain'? We live in times when the economic logic has become unquestionable and all-powerful so that our quotidian economic experiences are defined by their scientific construal. This book is the result of a multifaceted investigation into the nature of knowledge produced by economics, and the construction of the category that is termed 'economic' with its implied exclusions. It is an attempt to think economics Otherwise, that is, a questioning of economics as if difference mattered. Nitasha Kaul re-examines certain understood ways of thinking about economics as a discipline, especially in relation to questions of identity and difference. This book explores the notion that economics is not a timeless, universal, objective science but a changing response to the problems of knowledge and administration. The epistemological inheritance

of economics is 'rooted' in the enlightenment, and it also inherits the liberal paradoxes of that age. Kaul argues that the juxtaposition of identity with economic (culture/economy) is essential, and can only be achieved by critiquing establishment economists' discourse on identity, and taking feminist poststructural and postcolonial work seriously. The author challenges the assumption that there is a simple linkage between the category economic, the entity economy and the study of economics. She envisions an economics in the plural: contextual, social, political—econo-mixes. The book brings together some of the most urgent topics of the day—the power of economics as a discipline, the questions of difference and the politics of identity, and feminist perspectives on this. It will be particularly relevant to heterodox economists, feminist theorists, postcolonial studies scholars, social and cultural theorists, philosophers and history of ideas or intellectual history of thought scholars.

**The Experience Economy** Jan 13 2021 You are what you charge for. And if you're competing

solely on the basis of price, then you've been commoditized, offering little or no true differentiation. What would your customers really value? Better yet, for what would they pay a premium? Experiences. The curtain is about to rise, say Pine Gilmore, on the Experience Economy, a new economic era in which every business is a stage, and companies must design memorable events for which they charge admission. With *The Experience Economy*, Pine Gilmore explore how successful companies-using goods as props and services as the stage-create experiences that engage customers in an inherently personal way. Why does a cup of coffee cost more at a trendy cafe than it does at the corner diner or when brewed at home? It's the value that the experience holds for the individual that determines the worth of the offering and the work of the business. From online communities to airport parking, the authors draw from a rich and varied mix of examples that showcase businesses in the midst

of creating engaging experiences for both consumers and corporate customers. The Experience Economy marks the debut of an insightful, highly original, and yet eminently practical approach for companies to script and stage compelling experiences. In doing so, all workers become actors, intentionally creating specific effects for their customers. And it's the experiences they stage that create memorable and lasting impressions that ultimately create transformations within individuals. Make no mistake, says Pine Gilmore: goods and services are no longer enough. Experiences are the foundation for future economic growth, and The Experience Economy is the playbook from which managers can begin to direct new performances.

**Making Room** Mar 27 2022 Mentally ill people

turned out of institutions, crack-cocaine use on the rise, more poverty, public housing a shambles: as attempts to explain homelessness multiply so do the homeless--and we still don't know why. The first full-scale economic analysis of homelessness, *Making Room* provides answers quite unlike those offered so far by sociologists and pundits. It is a story about markets, not about the bad habits or pathology of individuals. One perplexing fact is that, though homelessness in the past occurred during economic depressions, the current wave started in the 1980s, a time of relative prosperity. As Brendan O'Flaherty points out, this trend has been accompanied by others just as unexpected: rising rents for poor people and continued housing abandonment. These are among the many disconcerting facts that O'Flaherty collected and analyzed in order to account for the new homelessness. Focused on six cities (New York, Newark, Chicago, Toronto,

London, and Hamburg), his studies also document the differing rates of homelessness in North America and Europe, and from one city to the next, as well as interesting changes in the composition of homeless populations. For the first time, too, a scholarly observer makes a useful distinction between the homeless people we encounter on the streets every day and those "officially" counted as homeless. O'Flaherty shows that the conflicting observations begin to make sense when we see the new homelessness as a response to changes in the housing market, linked to a widening gap in the incomes of rich and poor. The resulting shrinkage in the size of the middle class has meant fewer hand-me-downs for the poor and higher rents for the low-quality housing that is available. O'Flaherty's tightly argued theory, along with the wealth of new data he introduces, will put the study of homelessness on an entirely new plane. No future student or policymaker will be able to ignore the economic f
